EXPERIENCE

Java Backend Developer, Al-Quran application   (January 2023 - February 2023)
- Contributed to the development of the Al-Quran application, an application designed to provide users with a user-friendly platform for reading and listening to the Quran.
- Designed and developed the Sheikh module, which allowed users to listen to recitations of the Quran by various Sheikh's.
- Utilized my skills in Java, Spring Framework, RESTful API, and Postman to develop the Sheikh module and integrate it with the rest of the application.
- Debugged and fixed issues related to the Sheikh module, contributed to code reviews and testing, ensuring that the codebase was of high quality and met industry standards.
- Implemented design changes and new features based on user feedback, improving the app's functionality and usability.

PROJECT, Reservation application
- Designed and implemented the backend code using Java and Spring Boot, including the reservation functionality, email notifications.
- Created and maintained the reservation entity, service, DTO, and controller to handle incoming requests and responses.
- Implemented user authentication and authorization using Spring Security.
